NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner † See Note, page 306. an average for rheumatic fever, derived from the last 7 years and

in the THIRTY-EIGHTH Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

† See Note, page 306.

LONDON.—DEATHS from SMALL-POX, MEASLES, SCARLATINA, HOOPING-COUGH, DIARRHŒA, and TYPHUS registered in each SUB-DISTRICT during the Week ending Saturday, 22d September 1855.

|--------------|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| SUNDAY . .   | Positive, and active dur-<br>ing the morning; none at<br>night.                                                             | With the exception of a short time during the morning,<br>when the clouds were broken, the sky was overcast. A thin<br>misty rain fell at night.                                 |  |
| MONDAY . .   | No electricity was shown<br>at any examination.                                                                             | A thin misty rain fell till after 3h. p.m. A thick fog at<br>night.                                                                                                              |  |
| TUESDAY . .  | Weak positive was shown<br>both in the morning and<br>evening. It was strongly<br>positive during the middle of<br>the day. | The sky was overcast throughout the day. The sun's<br>place was occasionally visible; and at night a few stars were<br>faintly visible.                                          |  |
| WEDNESDAY    | Weak positive till the<br>evening, and none at night.                                                                       | A thin fog in the morning, the sky was partially clear<br>during the morning; there were some cumulus and cirro-<br>cumulus during the afternoon, and it was cloudless at night. |  |
| THURSDAY .   | Strong positive during the<br>morning and evening, and<br>weak positive during the<br>mid-day hours.                        | The sky was nearly free from cloud; hazy. A fine day.                                                                                                                            |  |
| FRIDAY . .   | None early in the morning,<br>strong positive at noon, and<br>weak positive at night.                                       | The sky was cloudless. A very fine day. A thin fog at<br>night.                                                                                                                  |  |
| SATURDAY .   | Active positive electricity<br>was shown throughout the<br>day.                                                             | A thick fog in the morning; after this the sky was almost<br>cloudless. A fine day, and clear night.                                                                             |  |

Cistern of bar, 159 ft. above mean level of sea. Readings coincident with those of R.S.'s  
flint-glass standard bar. Obs. taken at 9h. a.m.; noon; 3h. p.m.; 9h. p.m. The means of  
readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs.  
of 5 yrs. ending Dec. 31, 1845 (*Phil. Trans.*, Pt. 1, 1848). From values thus obtained, Col. 13  
is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermom.  
with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes  
that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined  
by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is deter-  
mined by Mr. Glaisher from all the thermometrical observations made at the Royal Obser-  
vatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means *higher*, - *lower* than  
average. Temp. of Thames is obtained from self-registering therm. suspended from  
Dreadnought Hosp. Ship, 2 ft. below the surface (under Captain Sanders, R.N., Super-  
intendent). Whewell's anemometer (Col. 22.) is read at 10h. a.m. The result is for 24 hours  
previous, and is placed opposite the day preceding that on which the reading is taken.

The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read  
each day at 9h. a.m., was 60° 0'; and the mean reading at 9h. p.m. was 60° 0'; the mean  
readings at the Royal Observatory for the same times were 59° 4' and 56° 7' respectively.

The reading of the barometer on the 16th was 29.95 in. almost without variation during  
the day; it increased to 30.01 in. by 9h. a.m. on the 17th; decreased to 29.81 in. by 3h. p.m.  
on the 18th; increased to 30.17 in. by 9h. a.m. on the 21st; decreased to 30.14 in. by 3h.  
p.m. on the same day; increased to 30.18 in. by 9h. a.m. on the 22d; decreased to 30.15 in.  
by noon; and continued at about this reading till the end of the week.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

---

1855. VOL. XVI.] WEEK ENDING SATURDAY, SEPTEMBER 29.

---

[No. 39.]

### HEALTH OF LONDON DURING THE WEEK.

THE deaths of 1160 persons were registered in London in the last week of the quarter that ended on Saturday 29th September, and though swollen by the accession of cases of violent deaths in which inquests were held some weeks since, this number is below the average. London is healthier than it is usually in September. Diarrhoea is declining, but was fatal to 75 persons, of whom 62 were under 3 years of age. Cholera was the cause of 9 deaths of persons of various ages. A boatswain, about 45 years of age, died of cholera on board ship off Brewer's Quay, Thames-street. The wife of a journeyman engine smith, aged 36 years, and the daughter of a tailor, aged 4 years, died of cholera on the 29th and 26th of September, at 15 Providence-street, St. George in the East. The Registrar's note on the two latter cases throws light on the circumstances in which zymotic diseases become epidemic and fatal:—"This house contains 3 rooms, one below ground; the upper room sub-let: the lower rooms were in a filthy condition. The sewer opposite the house is choked, and complaints are made of the negligence of the dust contractor. The son of the deceased mother has also been attacked with cholera, but is recovering. This I have on the authority of the medical officer of the parish, who has ordered an inspection of the nuisances."

The Registrars of Islington record 7 cases of diarrhoea, and state that an "excessive smell impregnates the atmosphere of the neighbourhood from the Belle Isle nuisances."

17 persons died of small-pox, 11 of measles, 45 of scarlatina, 20 of whooping-cough, and 50 of typhus in the week.

The diseases of the respiratory organs were less fatal than usual; for though the weather changed, the temperature was above the average.

Last week the births of 894 boys and 813 girls, in all 1707 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1455.

The barometer rose to 30·330 in. on Monday, and was 30·275 in. on Tuesday, when the moon was full; it descended to 29·431 in. on Saturday. Rain fell (0·37 in.) on Friday and Saturday. The mean daily temperature of the air at Greenwich was 56·6°, or 2·2° above the average. The temperature of the Thames was 60·7°, or 4·1° above the temperature of the air. The dew-point was 6·9° below the air temperature; and the earlier part of the week was dry. The wind blew from the north-east on the earlier days, and from the south-west on the latter days of the week, at velocities varying from 50 to 130 miles a day. Electricity was positive for the five first days; on Friday and Saturday no electricity was shown by the instruments.

The Registrars, in compliance with instructions given to them, make occasional communications in their returns with reference to the deaths they have registered, and to particular circumstances in which these have occurred. The correctness of such opinions and statements must be held to rest exclusively on the testimony of the Registrars, and of the medical or other informants.

ISLINGTON; *West*.—At 31 Upper Bingfield-street, on 24th September, the daughter of a baker, aged 17 months, “choleraic diarrhœa (4 days).”

In the same sub-district, at 17 Barnsbury-row, on 23d September, the son of a short-hand writer, aged 8 years, “malignant scarlet fever.” The medical attendant adds :—“This is the second child that has died of fever in this house during the last few weeks. The drains are defective, the water-closet is over-full; 12 cows are kept in the mews immediately behind the house, and there are several accumulations of manure. In addition to all this, a very excessive smell impregnates the atmosphere of this neighbourhood from the ‘Belle Isle nuisances.’”

HACKNEY; *Hackney*.—At 16 Victoria-street, Homerton, on 25th September, the widow of a ground labourer, aged 66 years, “English cholera (4 weeks), coma (3 days).”

HACKNEY; *West*.—At 1 Orchard-court, Kingsland, on 27th September, the daughter of a general labourer, aged 8 months, “cholera infantum (6 days).”

CITY OF LONDON; *South-east*.—On board ship off Brewer’s Quay, Thames-street, on 11th September, a boatswain, aged about 45 years, “cholera.” *Inquest*.

ST. GEORGE-IN-THE-EAST; *St. Mary*.—At 31 Henry-street, on 23d September, the widow of a journeyman tin plate worker, aged 30 years, “phthisis (3 months), choleraic diarrhœa (14 days).”

In the same sub-district, at 18 St. George’s court, on 22d September, the son of a dock labourer, aged 6 years, “choleraic diarrhœa (13 hours).”

In the same sub-district, at 15 Providence-street, on 29th September, the wife of a journeyman engine smith, aged 36 years, “cholera and consecutive fever (5 days).”

In the same sub-district, at 15 Providence-street, on 26th September, the daughter of a journeyman tailor, aged 4 years, “diarrhœa (duration uncertain), cholera (14 hours).”

SHOREDITCH; *Holywell and Moorfields*.—At 22 Clifton-street, North, on 22d September, the widow of a Custom House clerk, aged 66 years, “choleraic diarrhœa, anæmia (2 days).”

BIRTHS Registered LAST WEEK, and in the THIRTY-NINTH Week of Ten previous Years.

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

| CAUSES OF DEATH.                                           | Deaths from all Causes in the Week<br>ending Saturday, |                     |                     |                     |                     |                     |                     |                     |                     |                     | Averages of Temperature and Deaths<br>in 10 Weeks. | In the Week ending Saturday,<br>Sept. 29, 1855. |                              |                                     |                                     |                                     |                                    |

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

in the THIRTY-NINTH Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines

partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

DEATHS Registered in the THIRTY-NINTH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845-54 after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 117 PUBLIC INSTITUTIONS.

## ELECTRICITY.

|            |                                                                                                          |
|------------|----------------------------------------------------------------------------------------------------------|
| SUNDAY .   | Positive, and moderately strong in the morning, gradually becoming weaker till the evening.              |
| MONDAY .   | None in the morning, weak positive at noon; and strong positive from 3h. p.m.                            |
| TUESDAY .  | Positive, of moderate strength, and nearly uniform throughout the day.                                   |
| WEDNESDAY  | Positive throughout the day, being of weak tension during the mid-day hours, and strong at other times.  |
| THURSDAY . | Positive, and moderately strong in the morning, gradually decreasing till none was shown in the evening. |
| FRIDAY .   | No electricity was shown throughout the day.                                                             |
| SATURDAY . | No electricity was shown throughout the day.                                                             |

## GENERAL REMARKS.

Hazy early in the morning; the sky was generally free from cloud till 4h. p.m., after which time the amount was variable, the sky being at times overcast. A fine day.  
The sky was generally overcast till 5h., and cloudless after this time. A fine day.  
Overcast in the morning, the sun's place being visible; partially overcast till 5h. p.m., and no great amount of cloud till the evening. The night was unusually clear and bright.  
The sky was free from cloud throughout the day. The night was very fine, and the stars shone with great brilliancy.  
The sky was almost free from cloud till 7h. p.m., it became overcast at 7h. 30m. p.m., and at 8h. a little rain fell.  
Early in the morning there was blue sky in detached portions; during the day the sky was generally overcast; at 6h. 30m. p.m. a heavy shower of rain fell, accompanied by a strong wind, and distant thunder; two or three flashes of vivid lightning were seen.  
The sky was partially clear early in the morning, and overcast at other times. A thunder storm in the evening, accompanied with heavy rain.

Cistern of bar. 159 ft. above mean level of sea. Readings coincident with those of R.S.'s faint-glass standard bar. Obs. taken at 9h. a.m.; noon; 3h. p.m.; 9h. p.m. The means of readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs. of 5 yrs. ending Dec. 31, 1845 (*Phil. Trans.*, Pt. 1, 1848). From values thus obtained, Col. 13 is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermom. with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is determined by Mr. Glaisher from all the thermometrical observations made at the Royal Observatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means *higher*, — *lower* than average. Temp. of Thames is obtained from self-registering therm. suspended from Breadnought Hoop Ship, 2 ft. below the surface (under Captain Sanders, R.N., Superintendent). Whewell's anemometer (Col. 22) is read at 10h. a.m. The result is for 24 hours previous, and is placed opposite the day preceding that on which the reading is taken.  
The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read each day at 9h. a.m., was 57.2°; and the mean reading at 9h. p.m. was 53.3°; the mean readings at the Royal Observatory for the same times were 56.1° and 52.4° respectively.  
The reading of the barometer increased from 30.15 in. at the beginning of the week to 30.35 in. by 9h. p.m. on the 24th; decreased to 29.33 in. by 3h. p.m. on the 25th; and increased to 29.44 in. by the end of the week.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, OCTOBER 6.

[No. 40.]

### HEALTH OF LONDON DURING THE WEEK.

LONDON is healthier than it was in September. No death from cholera has been registered in the week that ended on Saturday, October 6th; but the deaths from diarrhoea were 51. The deaths from all causes were 951; namely, 260 from zymotic diseases, 210 from cancer, consumption, and other constitutional diseases; 320 from diseases of the brain, lungs, and other organs; 113 from infantile diseases and old age, and 24 from various kinds of violence. Of 5 sudden deaths the causes were unascertained, and of 19 other deaths the causes were not specified.

A coachman, aged 65, died in Marylebone Workhouse; his death is ascribed to destitution.

The barometer continued low during the whole week; and the reading was on an average 29.343 in. The mean temperature of the air was 56.2°; the mean dew-point was 52.1°; the mean temperature of the Thames was 59.9°. The temperature of the air was 3.4° above the average. The wind blew from the south-west at velocities varying from 50 to 190 miles a day. 1.38 in. of rain fell in the seven days. The week was windy, warm, and rainy.

13,042 persons died in London during the thirteen weeks that ended on September 29th, so that the deaths during the quarter were at the rate of 1003 a week. This presents a favourable contrast to the state of the public health in the corresponding quarter of last year, when 24,870 deaths, or 1913 weekly on an average, were registered in London.

The decrease has been chiefly in the diseases of the zymotic class, which were fatal in 14,633 cases, including 9708 of cholera, 2069 of diarrhoea, in the 13 summer weeks of 1854; and in 3661 cases in the 13 summer weeks of the present year, when 106 deaths were by cholera, 1258 by diarrhoea.

196 persons, chiefly children, died of small-pox, 107 of measles, 534 of scarlatina, 389 of hooping-cough, 677 of typhus and other fevers.

192 deaths were referred to dropsy, 287 to cancer, 1645 to consumption.

Among the diseases of particular organs are 300 deaths by apoplexy, 235 by paralysis, 88 by epilepsy, 54 by delirium tremens, 431 by convulsions, 475 by diseases of the heart and great blood-vessels, 491 by bronchitis, 492 by pneumonia, 141 by teething, and 122 by disease of liver. Of the deaths by violence in London, 16 were by poison, 33 by burns and scalds, 19 by hanging, 21 by suffocation, 101 by drowning, 158 by fractures and contusions, and 17 by wounds.

2224 deaths, or one in *six* of the total number, took place in public institutions; namely, 1191 in workhouses, 744 in civil hospitals, 73 in military and naval hospitals, 78 in military and naval asylums, 14 in hospitals and asylums for foreigners, 14 in lying-in-hospitals (7 women, 7 children), 94 in lunatic asylums, and 16 in 14 prisons.

3069 of the persons who died in London were males of the age of 20 and upwards; and of that number 83 were in government and local offices, 191 in the army or navy, 85 in or connected subordinately with the learned professions; 38 were engaged in literature, the fine arts, and the sciences; 363 were in the clothing, entertaining, and serving class; 167 were engaged in commerce, 343 in carrying, 75 in cultivating the land; 33 were occupied about animals; 523 on art and mechanic productions: 146 worked and dealt in animal substances, 393 in vegetable substances, 214 in minerals and metals; 215 were returned as labourers, without defining the branch of labour, 142 as persons of rank or property not in any office or profession. The numbers living and dying in each particular profession are given in the Table (pp. 328-9).

LONDON.—OCCUPATIONS of MALES aged 20 Years and upwards whose Deaths were registered in the Week ended Saturday, 6th October 1855.

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.  
\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.  
† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

DEATHS Registered in the FORTIETH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845–54, after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

The return from the Sub-district of Camberwell was not received in time for insertion in this Table in that at p. 324; in lieu thereof an average of 9 deaths, derived from the returns of six previous weeks, is inserted, and in the Table of Diseases added to *Causes not specified*. The true number is now ascertained to be 6.

#### LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

† See Note, page 323.

in the FORTIETH Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

† See Note, page 223.

LONDON.—DEATHS from SMALL-POX, MEASLES, SCARLATINA, HOOPING-COUGH, DIARRHŒA, and TYPHUS registered in each SUB-DISTRICT during the Week ending Saturday, 6th October 1855.

NOTE.—The letters placed against the names of the sub-districts denote public institutions situated therein, namely,  
W—Workhouse;  
H—Hospital;  
L—Lunatic asylum;  
P—Prison;  
w—a workhouse not belonging to the district in which it is situated. The following are—

#### OUTLYING WORKHOUSES:

St. George Hanover Square in Chelsea North-west sub-district.  
The Strand " Tottenham-court sub-district.  
East London " Hackney sub-district.  
St. Luke Old-street " Hoxton New Town sub-district.  
London City " Mile End Old Town Lower sub-dis.  
St. George Southwark, for Children " and Bow sub-district.  
" Lewisham Village sub-district.

\* The numbers on the left of the semicolons refer to the Districts in page 323.

† Islington West contains the Small-pox and Fever Hospitals.

METEOROLOGICAL OBSERVATIONS taken at the Royal Observatory, Greenwich, during the Week ending Saturday, 6th October 1855. Under the Superintendence of the Astronomer Royal.

ELECTRICITY.

|             |                                                                                                    |
|-------------|----------------------------------------------------------------------------------------------------|
| SUNDAY . .  | Positive and weak through-<br>out the day.                                                         |
| MONDAY . .  | Weak positive till the even-<br>ing, strong at night.                                              |
| TUESDAY . . | Strong positive at night,<br>weak positive at other times.                                         |
| WEDNESDAY   | Strong positive in the morn-<br>ing, weak during midday hours,<br>and none at night.               |
| THURSDAY .  | Strong negative from noon;<br>sparks were abundant, and gal-<br>vanic currents were frequent.      |
| FRIDAY . .  | Strong negative electricity<br>from noon, with galvanic cur-<br>rents and sparks.                  |
| SATURDAY .  | No electricity was shown till<br>the evening, when it was posi-<br>tive, and of moderate strength. |

GENERAL REMARKS.

The sky was for the most part overcast till 3h. p.m., when it became wholly so, and heavy rain fell without intermission until 5h. 30m. p.m., when it ceased for a short time; a heavy shower fell at 6h. 30m.; the sky was clear for a short time, and afterwards overcast again.

The sky was overcast till the evening, with exceptional gleams of sunshine; heavy showers of rain of short duration fell about noon. The night was clear.

There was a dense yellow misty fog in the morning, which partially cleared off before noon. The sky was over-  
cast till 6h. p.m., and cloudless afterwards. Hozy all day.

Overcast. Rain fell at intervals during the day, and without intermission during the evening.

Rain fell generally till 6h. p.m., when it began to clear. The night was cloudless, and the stars shone brilliantly.

Heavy showers of rain fell throughout the day.

The sky was partially overcast during the earlier portion of the day; from noon till 3h. p.m. it was generally over-  
cast; at 4h. it began to clear, and remained so till 9h. 15m.; when it suddenly became overcast, and a shower of rain fell.

Cistern of bar. 159 ft. above mean level of sea. Readings coincident with those of R.S.'s flint-glass standard bar. Obs. taken at 9h. a.m.; noon; 3h. p.m.; 9h. p.m. The means of readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs. of 5 yrs. ending Dec. 31, 1845 (*Phil. Trans.*, Pt. 1, 1848). From values thus obtained, Col. 13 is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermom. with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is deter-  
mined by Mr. Glaisher from all the thermometrical observations made at the Royal Obser-  
vatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means *higher*, — *lower* than  
average. Temp. of Thames is obtained from self-registering therms. suspended from  
Dreadnought Hosp. Ship, 2 ft. below the surface (under Captain Sanders, R.N., Super-  
intendent). Whewell's anemometer (Col. 22.) is read at 10h. a.m. The result is for 24 hours  
previous, and is placed opposite the day preceding that on which the reading is taken.

The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read  
each day at 9h. a.m., was 58.3°; and the mean reading at 9h. p.m. was 56.5°; the mean  
readings at the Royal Observatory for the same times were 57.1° and 54.4° respectively.

The reading of the barometer increased from 29.30 in. at the beginning of the week to  
29.61 in. by 9h. p.m. on the 2d; decreased to 29.16 in. by 9h. p.m. on the 4th; increased to  
29.26 in. by 9h. a.m. on the 5th; remained at this reading nearly during the day, and  
decreased to 29.19 in. by the end of the week.

BIRTHS Registered LAST WEEK, and in the FORTIETH Week of Ten previous Years.

† Islington West contains the Small-pox and Fever Hospitals.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, OCTOBER 13.

[No. 41.]

### HEALTH OF LONDON DURING THE WEEK.

THE deaths of 870 persons were registered in London during the week that ended on Saturday, October 13th; 449 of the number died under 20 years of age; 131 young men and women died of the age of (20-40); 124 persons had lived to the age of (40-60); and 124 more to the age of (60-80); while only 22 had passed 80 years, and approached the natural limit of human life (100 years).

223 of the deaths were by zymotic diseases, including 16 by small-pox, 50 by scarlatina, 44 by diarrhoea, 4 by cholera, 45 by typhus and other fevers. Consumption was the cause of 108 deaths, apoplexy of 23, paralysis of 16, bronchitis and pneumonia of 92. Eighteen violent deaths were registered. The average deaths in the corresponding week of the previous ten years was 995, or corrected for increase of population 1095. The deaths in the last week were 870, or 225 below the corrected average deaths in London.

The standard of comparison here is the average mortality of London; but that average is itself much above the average of England and Wales, and still further above the mortality in several of the healthiest districts of the country, where the annual deaths have been on an average of ten years at the rate of 14, 15, 16, and 17 in 1000 of the population; while the average mortality of London was nearer 25 than 24 in 1000.

At the annual rate of 17 deaths in 1000 living the weekly deaths in London would amount now to 836; and the excess of 34 may be referred to causes which were in operation, destroying during the week nearly *five* lives daily.

The 836 deaths may be held for the present to be natural deaths, as they are the result of natural causes; the 34 deaths may be considered unnatural deaths, as they are the results of extraneous causes that admit of removal.

The steps that have already been taken to supply the people of London with purer water than they received during the last cholera epidemic are already producing beneficial results; and the next most effectual measure of sanatory improvement will be the purification of the London atmosphere by the complete removal from the houses and streets daily of the residue of the organic matter which is brought into them daily.

Last week the births of 793 boys and 771 girls, in all 1564 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1313.

The new moon on Thursday was ushered in by rain, of which 0·39 in. fell in five days of the week, and wind which blew from the south-west and north-west over Greenwich at velocities ranging from 70 to 250 miles a day. The barometer was low (29·443 in.); the thermometer in the air 52·2°, so the mean temperature of the week is now descending to the mean temperature of the year. The mean dew-point was 46·8°. On Wednesday night the temperature of the air fell to 42·7°; of the grass to 38·0°. The mean of the highest temperatures of the air was 60·1°, which was nearly the mean of the highest temperatures of the Thames; but in the nights while the air was on an average at 46·2°, the waters of the Thames remained at 56·7°. On Tuesday the Thames was at night 13·3° higher than the lowest temperature of the air, and gave off vapor, which in the calm air was thrown down in fog.

The Registrars, in compliance with instructions given to them, make occasional communications in their returns with reference to the deaths they have registered, and to particular circumstances in which these have occurred. The correctness of such opinions and statements must be held to rest exclusively on the testimony of the Registrars, and of the medical or other informants.

CHelsea; South.—At 6 Mermaid-yard, on 6th and 7th October, the son and wife of a costermonger, aged respectively 3 and 31 years, “cholera maligna (24 and 50 hours).”

St. GEORGE HANOVER-SQUARE; Belgrave.—At 1 Ranelagh Cottages, on 6th October, the son of a bricklayer’s labourer, aged 5 years, “cholera (14 hours).” Dr. Aldis reports, “that a considerable portion of the old Ranelagh sewer remains open at the back of the house, and the inhabitants complain of noxious effluvia.”

WESTMINSTER; St. Margaret.—At House of Correction, Tothill-fields, on 10th October, the wife of a stonemason, aged 45 years, “Asiatic cholera (12 hours).”

St. PANCRAS; Somers Town.—At 22 Bridgewater-street, on 9th October, the daughter of a cabriolet coachman, aged 13 years, “congestion of brain (3 days), effusion (24 hours).” House very offensive, no regular closet, boards loose and decayed, and offensive smells proceed through from cesspool. House to house visitation much wanted.

In the same sub-district, at 49 Union-street, on 12th October, the son of a cordwainer, aged 4 years, “rubeola (4 days), pneumonia (7 days).” Removed from 22 Bridgewater-street. Another child very ill attributes illness to the above house.

HOLBORN; St. George-the-Martyr and St. Andrew Western.—At 43 Eagle-street, on 10th October, the wife of a bricklayer, aged 42 years, “perforation of the coats of the stomach, producing inflammation of the peritoneum.”

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several Classes, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

† See Note, page 334.

in the **Forty-first** Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines

partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

DEATHS Registered in the FORTY-FIRST WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845-54 after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

NOTE.—The letters placed against the names of the sub-districts denote public institutions situated therein, namely,

W—Workhouse;  
H—Hospital;  
L—Lunatic asylum;  
P—Prison;

w—a Workhouse not belonging to the district in which it is situated. The following are—

#### OUTLYING WORKHOUSES:

St. George Hanover Square in Chelsea North-west sub-district.  
The Strand - " Tottenham-court sub-district.  
East London - " Hackney sub-district.  
St. Luke Middlesex - " Hoxton New Town sub-district.  
London City - " Mile End Old Town Lower sub-dis-  
and Bow sub-district.  
St. George Southwark, for Children - " Lewisham Village sub-district.

\* The numbers on the left of the semicolons refer to the Districts in the preceding page.

† Islington West contains the Small-pox and Fever Hospitals.

METEOROLOGICAL OBSERVATIONS taken at the Royal Observatory, Greenwich, during the Week ending Saturday, 13th October 1855. Under the Superintendence of the Astronomer Royal.

| SUNDAY .     | Weak positive during the morn-<br>ing, strong positive at other times<br>of the day.                                                          | Early in the morning the sky was overcast; during<br>the remainder of the day the amount of cloud was<br>variable. Rain fell heavily between 3h. A.M. and<br>4h. 10m. A.M.<br>Three fourths of the sky were generally covered<br>with cloud during the morning, and for the remainder<br>of the day the sky was for the most part clear.<br>Lightning was seen at night.<br>Thick fog prevailed during the morning, haze and<br>thin clouds frequently obscured the sky till evening,<br>after which time it was overcast.<br>Overcast during the earlier morning hours; one half<br>of the sky was generally covered till evening, and the<br>amount of cloud was variable afterwards. Rain fell<br>at 3h. A.M.<br>The clouds were at times broken during the after-<br>noon, otherwise the sky was overcast throughout the<br>day. Rain fell frequently.<br>Occasional gleams of sunshine between 1h. and 2h. P.M.;<br>the sky was, however, for the most part covered with<br>cloud throughout the day. Rain fell frequently.<br>One third portion of the sky was generally covered<br>with cloud until the evening, after which time the<br>amount of cloud was variable, the sky having been<br>alternately clear and cloudy. |  |
| MONDAY .     | Positive and moderate during the<br>morning and afternoon; positive<br>and very active at night; sparks<br>were shown.                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| TUESDAY      | Strong positive throughout the<br>day; volleys of sparks were shown<br>during the morning.<br>Weak positive till evening, strong<br>at night. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| WEDNESDAY    | No electricity was shown.                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| THURSDAY .   | Weak positive during the morn-<br>ing; none was shown at other times.                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| FRIDAY .     | No electricity was shown.                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |
| SATURDAY .   |                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |  |

Cistern of bar. 159 ft. above mean level of sea. Readings coincident with those of R.S.'s  
flint-glass standard bar. Obs. taken at 9h. A.M.; noon; 3h. P.M.; 9h. P.M. The means of  
readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs.  
of 5 yrs. ending Dec. 31, 1845 (*Phil. Trans.*, Pt. 1, 1848). From values thus obtained, Col. 13  
is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermom.  
with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes  
that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined  
by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is  
determined by Mr. Glaisher from all the thermometrical observations made at the Royal  
Observatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means *higher*, — *lower*  
than average. Temp. of Thames is obtained from self-registering therm. suspended from  
Dreadnought Hosp. Ship, 2 ft. below the surface (under Captain Sanders, R.N., Super-  
intendent). Whewell's anemometer (Col. 22.) is read at 10h. A.M. The result is for 24 hours  
previous, and is placed opposite the day preceding that on which the reading is taken.  
The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read  
each day at 9h. A.M., was 53.5°; and the mean reading at 9h. P.M. was 52.3°; the mean read-  
ings at the Royal Observatory for the same times were 51.5° and 50.6° respectively.  
The reading of the barometer increased from 29.19 in. at the beginning of the week  
to 29.41 in. by 9h. P.M. on the 8th; and remained at this reading nearly till 9h. P.M. on  
the 9th; increased to 29.67 in. by 9h. P.M. on the 10th; decreased to 29.45 in. by 3h. P.M.  
on the 11th; increased to 29.55 in. by noon on the 13th; and decreased to 29.52 in. by the  
end of the week.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

---

[No. 42.]

### HEALTH OF LONDON DURING THE WEEK.

IN the week that ended on Saturday, October 20th, 927 deaths were registered, showing an increase of 57 deaths over the number that was registered in the previous week. 480 males and 447 females died ; of the two sexes 463, or more than half the total number, were under 20 years of age ; 154 were of the age 20 to 40 ; 150 of the age 40 to 60 ; 129 of the age 60 to 80 ; and 25 of the age of 80 and under 100 years. The mortality is below the average rate of London, but 91 in excess of the deaths that would have happened under a satisfactory sanatory state.

Through the neglect of vaccination small-pox was fatal to 12 children, and to 4 adults. Measles was only fatal to 6 children ; 3 in the north, none in the south districts. But scarlatina is very prevalent, particularly in certain districts shown in the table, and has taken away the lives of 73 children and 3 adults. 43 deaths are referred to typhus, and 41 to diarrhœa.

The wife of a bricklayer's labourer, aged 40, died on October 11th of malignant cholera, after 5 days illness, at 19 New Peter-street, Westminster. A dock labourer, aged 49, died on October 13th, from diarrhœa (8 hours), Asiatic cholera (36 hours), at 16 St. George's-court, St. George-in-the-East.

Of cancer 24 persons died, consumption 112, apoplexy and paralysis 38, heart disease 36, bronchitis, pleurisy, and pneumonia 97, of liver diseases 16. *Eleven* violent deaths were registered.

A foreign seaman (black), aged 17, died of "suffocation from charcoal, ignited for the purpose of killing rats," in the West India Dock basin.

A death in the sub-district of St. Peter Walworth of the wife of an oilman at the age of 22 is thus returned : "The heart's action suddenly arrested from excitement."

Last week the births of 915 boys and 810 girls, in all 1725 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1391.

The moon was in her first quarter on Thursday ; the elasticity of the atmosphere increased and the barometer rose from 29·375 in. on Sunday to 30·069 in. on

Saturday. The temperature of the air ranged from 36·8° to 64·8°; the mean temperature was 50·1°, or near the average of the season. The mean dew-point was 46·1°. The thermometer on the grass fell below the freezing point of water (31·4°) on Tuesday night. The water of the Thames was 54·7°. The wind was calm, or blew gently from the west, until Saturday, when the north-west wind passed over Greenwich at the rate of 210 miles a day. Electricity was positive and strong on five days; half an inch (0·54) of rain fell on four days.

BIRTHS Registered LAST WEEK, and in the FORTY-SECOND Week of Ten previous Years.

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

| CAUSES OF DEATH.                                             | Deaths from all Causes in the Week ending Saturday, |              |              |              |              |              |              |              |              |              | Averages of Temperature and of Deaths in 10 Weeks. | In the Week ending Saturday, Oct. 20, 1855. |                        |                                  |                                  |                                  |                                 |

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

† See Note, page 342.

in the FORTY-SECOND Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

† See Note, page 342.

DEATHS Registered in the FORTIETH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845-54, after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

NOTE.—The letters placed against the names of the sub-districts denote public institutions situated therein, namely,

W—Workhouse;  
H—Hospital;  
L—Lunatic asylum;  
P—Prison;

w—a workhouse not belonging to the district in which it is situated. The following are—

#### OUTLYING WORKHOUSES:

St. George Hanover Square in Chelsea North-west sub-district.  
The Strand - " Tottenham-court sub-district.  
East London - " Hackney sub-district.  
St. Luke Middlesex - " Hoxton New Town sub-district.  
London City - " Mile End Old Town Lower sub-dis-  
St. George Southwark, } and Bow sub-district.  
for Children - " Lewisham Village sub-district.

\* The numbers on the left of the semicolons refer to the Districts in the preceding page.

† Islington West contains the Small-pox and Fever Hospitals.

METEOROLOGICAL OBSERVATIONS taken at the Royal Observatory, Greenwich, during the Week ending Saturday, 20th October 1855. Under the Superintendence of the Astronomer Royal.

| SATURDAY .  | Strong positive throughout the day.                                                                   |

## GENERAL REMARKS.

Until the evening clouds covered the sky, and between 4h. P.M. and 5h. P.M. great gloom prevailed; at night the sky was occasionally clear, and at other times partially covered. Slight rain fell early in the morning.

The sky was for the most part three fourths covered with cloud until the afternoon, and overcast afterwards. Rain fell from 4h. P.M. till 8h. 30m. P.M. Fog prevailed at night. Clouds partially covered the sky until the evening, overcast afterwards. Rain fell heavily from 10h. 30m. P.M. till midnight.

The sky was overcast during the morning and at night; at other times of the day the amount of cloud was variable.

The clouds were occasionally broken during the afternoon, otherwise the sky was overcast till the evening, and clear afterwards. A fine aurora was seen at night, with coloured streamers; the magnets were much disturbed.

During the morning and afternoon some light portions of cloud occasionally prevailed; at night the sky was clear.

The sky was for the most part clear during the morning, and three fourths covered with cloud at other times of the day.

Cistern of bar, 159 ft. above mean level of sea. Readings coincident with those of R.S.'s flint-glass standard bar. Obs. taken at 9h. A.M.; noon; 3h. P.M.; 9h. P.M. The means of readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs. of 5 yrs. ending Dec. 31, 1845 (*Phil. Trans.*, Pt. 1, 1848). From values thus obtained, Col. 13 is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermometer with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is determined by Mr. Glaisher from all the thermometrical observations made at the Royal Observatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means *higher*, - *lower* than average. Temp. of Thames is obtained from self-registering therm. suspended from Dreadnought Hosp. Ship, 2 ft. below the surface (under Captain Sanders, R.N., Superintendent). Whewell's anemometer (Col. 22.) is read at 10h. A.M. The result is for 24 hours previous, and is placed opposite the day preceding that on which the reading is taken.

The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read each day at 9h. A.M., was 50° 2'; and the mean reading at 9h. P.M. was 50° 5'; the mean readings at the Royal Observatory for the same times were 50° 6' and 48° 7' respectively.

The reading of the barometer decreased from 29.44 in. at the beginning of the week to 29.30 in. by 3h. P.M. on the 15th; decreased to 30.10 in. by 9h. A.M. on the 20th; and decreased to 30.04 in. by the end of the week.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, OCTOBER 27.

[No. 43.]

### HEALTH OF LONDON DURING THE WEEK.

The mortality in London is much below the usual average rate which prevails within its limits. The deaths of 903 persons were registered in the week that ended on Saturday, October 27th; while the corrected average of the corresponding weeks of the previous ten years was 1079.

The weekly deaths would amount to 836 in London, if the annual rate of mortality did not exceed the natural rate of 17 deaths in 1000; so in the present week 67 deaths by unnatural causes have been recorded.

Of the 903 persons who died, 437 were under 20 years of age, 129 were 20 and under 40, 155 were 40 to 60, 158 were 60 to 80, and 24 were 80 years of age and upwards.

219 persons died of zymotic diseases, including 7 by cholera, 10 by small-pox, 58 by scarlatina, 49 by typhus or by the various forms of fever.

The death of the late secretary of state for the colonies in the Belgrave sub-district, at the age of 45, is referred to "gastric fever and low peritonitis."

Two men died from peritonitis in St. George's Hospital, which is in the same sub-district; a baker, aged 26, from Cheyne-walk, Chelsea, and a gilder, aged 31, from Thomas-street, Oxford-street.

The ravages of scarlatina in St. Pancras, where it has caused 13 deaths, require investigation.

The 7 cases of death from cholera demand unusual attention, and are subjoined in some detail.

CHelsea; *North-west*.—At 16 College-place, on 23d October, a stonemason, aged 51 years, "cholera (32 hours)."

WESTMINSTER; *St. John the Evangelist*.—At Coldstream Guards Hospital, Vincent-square, on 21st October, the daughter of a hospital steward, aged 9 months, "chronic bronchitis (6 months), cholera infantum (14 hours)."

In the same sub-district, at Millbank Prison, on 18th October, a prisoner formerly a smith, aged 34 years, "Asiatic cholera (43 hours)." *Inquest*.

In the same sub-district, at Millbank Prison, on 19th October, a prisoner formerly a labourer, aged 62 years, "Asiatic cholera (22 hours)." *Inquest*.

In the same sub-district, at Millbank Prison, on 20th October, a prisoner formerly a labourer, aged 63 years, "Asiatic cholera (33 hours)." *Inquest*.

In the same sub-district, at 14 Old Pye-street, on 26th October, the son of a fishmonger, aged 13 years, "malignant cholera (12 hours)."

WEST LONDON; *North*.—At 44 Fleet-lane, on 22d October, the daughter of a coal dealer, aged 6 years, "sporadic cholera (15 hours)."

Three of these deaths were, it will be observed, in the Millbank prison.

The deaths from diarrhœa have fallen from 154 weekly in August to 51, 44, 41 in October, and in the last week to 27.

18 persons died of cancer, 116 of consumption, 54 of apoplexy and paralysis, 35 of diseases of heart, and 19 of dropsy, 105 of bronchitis and pneumonia; 9 women died in childbirth. 27 violent deaths were registered.

In the week the births of 737 boys and 790 girls, in all 1527 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1411.

The moon was at the full on Thursday; the barometer which was at 30·051 in. on Monday fell down to 29·037 in. on Friday; the daily mean temperature was 50·2°, or 2·1° above the average, but fluctuated from 56·9° to 41·1° during the

week. The temperature on the grass was below the freezing point of water during two or probably three nights. On Wednesday night the temperature of the Thames was 12°·1° above the temperature of the air. The mean dew-point was 47°·2°, and the difference between that and the air 3°·0°. The wind veered about and changed from N.W. to S.W. ; from calm with dense fog on Monday to storm on Thursday, when 235 miles of wind passed over Greenwich in squalls blowing hard, and once with a force of 14 lbs. on a square foot. 0·60 in. of rain fell on four days of the week ; and 0·47 in. of this quantity fell on Friday. Electricity was strong and positive throughout the week. A solar halo was visible on Saturday.

WESTMINSTER ; *St. Margaret*.—At the Workhouse, on 25th October, a female not known, aged 34 years, “intemperance, debility.”

ST. PANCRAS ; *Somers Town*.—At 12 Clarendon-street, on 22d October, the daughter of a baker, aged 5 years, “scarlatina anginosa (2 weeks).” The following is added to the medical certificate :—“I have had to complain of the exceedingly defective drainage of this house, and I find that the soil in the privy has not been removed for the last 7 years, and is now overflowing, the atmosphere of the apartments is most noxious, and on inquiry I find that there have been 5 cases and 3 deaths in the same house from scarlatina.” Mr. Matthews, the Registrar, observes :—“Scarlatina is very prevalent in this part of my district, and a sanatory committee and house to house visitation are much needed at the present time.”

In the same sub-district, on 29th August, a surveyor, aged 58 years, “enteritis and peritonitis, caused by intoxicating liquors.”

LAMBETH ; *Kennington 1st Part*.—At 11 Pleasant-row, Kennington-lane, on 22d October, a pew-opener, aged 70 years, “enlargement of the heart, uncertain spasm of the heart.” Of the spasm of the heart the medical attendant on his certificate says, “the immediate cause was overjoy.”

BIRTHS Registered LAST WEEK, and in the FORTY-THIRD Week of Ten previous Years.

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

| CAUSES OF DEATH.                                                  | Deaths from all Causes in the Week<br>ending Saturday, |                    |                    |                    |                    |                    |                    |                    |                    |                    | Averages of Tempe-<br>rature and of Deaths<br>in 10 Weeks. | In the Week ending Saturday,<br>Oct. 27, 1855. |                           |                                     |                                     |                                     |                                    |

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

in the FORTY-THIRD Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

DEATHS Registered in the FORTY-THIRD WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845-54 after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

**ELECTRICITY.**

SUNDAY . Weak positive during the morn-  
ing, strong during the remainder  
of the day.

MONDAY . Strong positive throughout the  
day.

TUESDAY . Moderate positive throughout the  
day.

WEDNESDAY . Strong positive during the morn-  
ing, and also at night; weak at  
other times of the day.

THURSDAY . No electricity was shown during  
the morning. Weak positive during  
the afternoon; strong at night.

FRIDAY . Strong negative during the morn-  
ing; strong positive at other times  
of the day; volleys of sparks and  
galvanic currents were shown dur-  
ing the afternoon.

SATURDAY . Positive and strong throughout  
the day; sparks were frequent from  
noon.

**GENERAL REMARKS.**

The sky was covered with cloud throughout the day. Thick rain fell frequently during the evening.

Dense fog prevailed during the earlier portion of the morning; until evening the greater part of the sky was covered with cloud, after which time it was alter-  
nately clear and cloudy. Thick rain fell at intervals during the evening.

Clouds covered the sky throughout the day.

During the morning a small amount of cloud pre-  
vailed; at other times of the day the sky was clear.

Until the evening the sky was overcast, occasional  
breaks occurred in the clouds afterwards. Rain fell  
between 2h. and 8h. p.m., and also during the evening.

During the morning the wind blew with great force,  
accompanied with heavy squalls of rain, at 9h. a.m.  
the rain fell with great violence; until evening the  
sky remained overcast, and it was occasionally clear  
afterwards.

The sky was covered during the morning with thin  
cirrostratus. A solar halo was visible from 11h. a.m.  
to 1h. p.m. The sky was overcast during the after-  
noon hours, and was clear at night.

Cistern of bar 159 ft. above mean level of sea. Readings coincident with those of R.S.'s  
flint-glass standard bar. Obs. taken at 9h. a.m.; noon; 3h. p.m.; 9h. p.m. The means of  
readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs.  
of 5 yrs. ending Dec. 31, 1845 (*Phil. Trans.*, Pt. 1, 1848). From values thus obtained, Col. 13  
is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermom.  
with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes  
that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined  
by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is  
determined by Mr. Glaisher from all the thermometrical observations made at the Royal  
Observatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means *higher*, - *lower*  
than average. Temp. of Thames is obtained from self-registering therm. suspended from  
Dreadnought Hosp. Ship, 2 ft. below the surface (under Captain Sanders, R.N., Super-  
intendent). Whewell's anemometer (Col. 22.) is read at 10h. a.m. The result is for 24 hours  
previous, and is placed opposite the day preceding that on which the reading is taken.

The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read  
each day at 9h. a.m., was 52.2°; and the mean reading at 9h. p.m. was 50.2°; the mean read-  
ings at the Royal Observatory for the same times were 49.8° and 47.8° respectively.

The reading of the barometer decreased from 30.05 in. to 29.97 in. by noon on the 21st;  
increased to 30.10 in. by 9h. a.m. on the 22d; decreased to 29.70 in. by 9h. p.m. on the 23d;  
increased to 29.96 in. by 9h. p.m. on the 24th; decreased to 29.03 in. by noon on the 26th;  
and increased to 29.50 in. by the end of the week.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, NOVEMBER 3.

[No. 44.]

### HEALTH OF LONDON DURING THE WEEK.

THE mortality in London is still below its average rate, for 919 deaths were registered in the week that ended on Saturday, November 3d, or 193 less than the corrected average of previous years.

At the annual rate of 17 in 1000, which rules in the healthy districts of England, the deaths would be 836 weekly in London, so that the deaths in the last week by unnatural causes were 83 or *twelve* daily.

Of the 919 persons who died, 451 were males, 468 were females; 457 were under 20 years of age; 149 were of the age of 20-40; 135 of the age 40-60; 153 were 60-80; and 22 were aged 80 and under 100 years.

227 persons died by zymotic diseases; 14 by small-pox, 11 by measles, 70 by scarlatina, 22 by hooping-cough, 13 by croup, and 49 by typhus and the various forms of fever.

In one house, 24 Ewer-street, St. Saviour, Southwark, 3 children died of small-pox within 5 days. Scarlatina still prevails with much intensity in Saint Pancras. The deaths from diarrhoea (24) are much below the average number; yet 3 cases of death from cholera are recorded:—

WESTMINSTER; *St. John*.—In Millbank Prison, on 29th October, a prisoner, formerly a labourer, aged 27 years, “Asiatic cholera (11 days).” (*Inquest*.)

CHELSEA; *North West*.—In the Workhouse, on 28th October, a widow, aged 74 years, “Asiatic cholera (30 hours).”

CHELSEA; *South*.—At Royal Military Asylum, on 29th October, a laundress to the institution, aged 49 years, “cholera spasmodica (6 days).” *Post mort*.

It will be observed that one death occurred in the Millbank Penitentiary; two in the Chelsea district. The mortality is much above the average in Chelsea, Kensington, and Saint George Hanover-square, which are still supplied with the impure Thames water; while the districts that now have better water on the south side of the river experience a lower rate of mortality than they did in the previous ten years. Thus in the last 2 weeks the deaths in Bermondsey have been 10 and 10; while the deaths in the corresponding weeks of the 10 years 1845-54 ranged from 18 to 34, and were 25 on an average. Bermondsey was then supplied with the dirty water of the Thames at Battersea, and is now supplied with the water of the Thames from Hampton, six miles above the tidal range.

124 persons died of consumption, 68 at the ages 20-40, 28 at the ages 40-60. Apoplexy and paralysis were fatal to 33 persons, heart disease to 33, dropsy to 11, bronchitis and pneumonia to 122 persons. 47 deaths by violence were registered in the week.

Last week the births of 671 boys and 675 girls, in all 1346 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1440.

The moon was in its last quarter on Thursday ; the barometer was low during the whole week, the mean ranging from 28·973 in. daily to 29·624 in., and averaging 29·412 in. The air at its highest on Sunday (53·0°) on Friday night fell below the freezing point (30·3°) for the first time in the season, and the mean daily temperature of the week fell to 42·8°, or seven degrees below the temperature of the previous week, and *four* degrees nearly below the average of the corresponding days of 38 years. The mean dew-point was 41·1°, and 1·7° below the temperature of the air ; the air was consequently damp, and was completely saturated with watery vapour on five nights. The temperature of the Thames fell from 51·9° to 46·2° during the week. The wind blew gently at first from the north, veering sometimes to the east or west, but on the four last days passed over Greenwich at rates ranging from 195 to 110 miles daily. The fall of rain in the week was 3·03 in. in five days ; and more than an inch of rain fell on Tuesday. Electricity strong or feeble was sometimes positive, sometimes negative. The sky was overcast, and the meteorologists of Greenwich enter on their register at the end of the week three “ cold and dull days,” which accurately enough express the popular feeling.

BIRTHS Registered LAST WEEK, and in the FORTY-FOURTH Week of Ten previous Years.

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several Classes, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner † See Note, page 358.

in the FORTY-FOURTH Week of each of the following Years.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

† See Note, page 358.

Deaths in Districts.

DEATHS Registered in the FORTY-FOURTH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845–54, after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

| MONDAY . .   | Weak positive during the morning, and negative from noon.                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| TUESDAY . .  | Negative, with variable tension during the day.                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| WEDNESDAY    | Strong negative at night; no electricity at other times of the day.                                                          | The greater portion of the sky was covered with cloud during the morning; in the afternoon the amount of cloud was small, and at night the sky was clear. A cold and dull day.<br>Overcast; a great gloom and thick fog prevailed during the morning. Rain fell at night. A cold and dull day.                                                                                                                                                                                                                                                                                                                                                                                       |  |  |
| THURSDAY .   | Weak positive at noon; strong positive at night.                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| FRIDAY . .   | Weak positive at noon; strong positive at night; sparks were shown.                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |  |
| SATURDAY .   | Strong positive, and at times strong negative; volleys of sparks and galvanic currents were frequent, chiefly with negative. | The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read each day at 9h. a.m., was 45° 0'; and the mean reading at 9h. p.m. was 43° 2'; the mean readings at the Royal Observatory for the same times were 43° 5' and 42° 6' respectively.<br>The reading of the barometer increased from 29.50 in. at the beginning of the week to 29.61 in. by 8h. p.m. on the 28th; decreased to 28.97 in. by 9h. a.m. on the 30th; continued at this reading till after noon, then began to increase; was at 29.61 in. from noon to 3h. p.m. on November 2d; decreased to 29.52 in. by 9h. p.m. on the same day; and increased to 29.74 in. by the end of the week. |  |  |

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, NOVEMBER 10.

[No. 45.

### HEALTH OF LONDON DURING THE WEEK.

THE mortality of London shows a tendency to increase, but it continues much below the rate which is usually found to prevail in the beginning of November. Last week the deaths of 986 persons, viz. 473 males and 513 females, were registered. The daily average number was 141, which is less by 21 than the average rate of mortality in the corresponding weeks of the last ten years would have produced; but it also exceeds by 21 the number that occurs daily in the healthy districts of England.

Cholera was fatal in only two cases, and in both to infants, one of whom died of "cholera infantum," and the other of "choleraic diarrhœa." Scarlatina destroyed 61 lives, and several districts have suffered from it severely. Three children died from this complaint last week in Saint John, Paddington, and one of the medical men states that "it is making great havoc in the district, and sanitary measures should be taken by the local authorities." In Saint Pancras it was fatal in 7 cases; and the medical attendant of a case in Somers Town writes:—"The great increase of scarlatina and typhus in my neighbourhood requires immediate attention, and it is necessary (I think) that a sanitary committee for the district should be appointed." Judging from the number of deaths the disease seems to be very prevalent in Shoreditch and Cripplegate.

One person died from exposure to cold; and a woman, aged about 55 years, was found in a state of destitution, and having been conveyed to the Greenwich Workhouse, died on 7th November, 24 hours after admission.

Last week the births of 896 boys and 818 girls, in all 1714 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1465.

There was new moon on Friday the 9th; the barometer rose to 30·08 in. by 9 h. A.M. on the 5th. The mean reading of the week was 29·791 in. The highest reading of the thermometer in the week was 58° on Tuesday. The lowest occurred on the previous day, and was 31·2°. The mean temperature of the week was 46°, which is one degree higher than the average of the same week. On Sunday and Monday the air was cold; afterwards the mean temperature was more or less above the average. The mean dew-point temperature was 43·3°, and the difference between it and the air temperature was 2·7°. The temperature of the Thames was 44°. After Monday the wind blew from the south. Rain fell to the amount of 0·33 in., the greater part of which fell on Thursday.

In the Return for week ending November 3d St. George Hanover Square was mentioned as being a district, amongst others, where the mortality was much above the average, and which are "still supplied with impure Thames water." The observation is strictly applicable only to the larger part of that district, viz. the Belgrave sub-district, which contains a population of 40,034, whilst the population of the remaining part of the district is 33,196. Mr. Coe, the Secretary of the Grand Junction Waterworks Company, in a letter addressed to the Registrar-General, makes the following statement:—

"The whole of the parish of St. George Hanover Square north of the Green Park is supplied by the Grand Junction Waterworks Company with water taken from Hampton (the same spot whence the Companies south of the Thames to which you refer draw their supply), and is perfectly filtered prior to delivery. The new supply commenced on the 7th of August, between three and four weeks before the period prescribed by the Metropolitan Water Act of 1852."

Mr. Whiffin, the secretary, states, that the *West Middlesex Company* has drawn its water from new works at Hampton, six miles above the tidal range, ever since July 19th. After subsidence in two

large reservoirs at Barnes, all the water is filtered before delivery. This company supplies Marylebone, a part of Hampstead, and, the secretary now says, “nearly the whole of Kensington” parish, but only a part of the Kensington district, which is largely supplied by the Grand Junction and the Chelsea Companies.

It is gratifying to know, that the water of four companies, which was formerly drawn from parts of the Thames which the London sewers polluted, is now drawn from a purer part of the river. These companies deserve credit for having completed their works within the periods fixed by the legislature.

The Chelsea Company, which supplies Chelsea, Brompton, Belgravia, and the Westminster districts, are, under their Act of Parliament, not bound to abandon the present source of supply at Battersea, and furnish the population of these important districts with the purer water from Seething Wells above Kingston, before 1856.

*The Registrars, in compliance with instructions given to them, make occasional communications in their returns with reference to the deaths they have registered, and to particular circumstances in which these have occurred. The correctness of such opinions and statements must be held to rest exclusively on the testimony of the Registrars, and of the medical or other informants.*

ST. OLAVE ; *St. John*.—At 8 Heath’s-rents, on 7th November, the son of a railway porter, aged 4 years, “fever (3 weeks).” Dr. Challice, the medical attendant, adds the following remark :—“The house is unfit for habitation in consequence of effluvia from a cesspool. The father is in a very precarious state, principally from this cause.”

LAMBETH ; *Norwood*.—At Gipsy House-road, on 27th and 29th October, two daughters of a labourer, aged respectively 4 years and 2 years, “croup.” “The medical attendant pronounces this dwelling unfit for human beings.”

STRAND ; *St. Anne*.—At 13 Princes-street, on 4th November, the daughter of a domestic servant, aged 6 days, “loss of vital power from extreme closeness of the room.”

STEPNEY ; *Ratcliff*.—At 60 Brook-street, on 31st October, a rigger, aged 65 years, “natural death by the visitation of God, and complaint against the room in which he lived.” (*Inquest.*)

CLERKENWELL ; *Goswell-street*.—On 2d November, a lady, aged 28 years, “catalepsy (8 months), exhaustion from inability to take food except by force.”

ST. GEORGE HANOVER-SQUARE ; *Belgrave*.—At 1 Ebury-square, on 2d November, the daughter of a slate-polisher, aged one month, “cholera infantum (one week), diarrhœa after the vomiting ceased (4 days) ; dry-nursed.”

WESTMINSTER ; *St. Margaret*.—In the House of Correction, on 8th November, the daughter of a labourer, aged 10 months, “choleraic diarrhœa.”

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

in the FORTY-FIFTH Week of each of the following Years.

multipled by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

DEATHS Registered in the FORTY-FIFTH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845-54 after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

NOTE.—The letters placed against the names of the sub-districts denote public institutions situated therein, namely,

W—Workhouse;

H—Hospital;

L—Lunatic asylum;

P—Prison;

w—a Workhouse not belonging to the district in which it

is situated. The following are—

#### OUTLYING WORKHOUSES:

St. George Hanover Square in Chelsea North-west sub-district.

The Strand - - - - - Tottenham-court sub-district.

East London - - - - - Hackney sub-district.

St. Luke Middlesex - - - - - Hoxton New Town sub-district.

London City - - - - - Mile End Old Town Lower sub-dis-

St. George Southwark, for Children } and Bow sub-district.

St. George Southwark, for Children } Lewisham Village sub-district.

\* The numbers on the left of the semicolons refer to the Districts in the preceding page.

† Islington West contains the Small-pox and Fever Hospitals.

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

---

1855. VOL. XVI.]      WEEK ENDING SATURDAY, NOVEMBER 17.

---

[No. 46.]

### HEALTH OF LONDON DURING THE WEEK.

THE rate of mortality in last week was rather higher than it had been in October, but was still considerably below that which commonly prevails at this advanced period of the year, though the health of old persons has probably suffered already from the cold and fog of November. In the week that ended on Saturday 975 deaths, of which 527 were those of males, and 448 those of females, were registered in London, being 177 less than the average mortality of corresponding weeks in the years 1845-54, if raised in proportion to increase of population.

Diseases of the zymotic class are in the aggregate less fatal than usual; the mortality from diseases of the respiratory organs is nearer the ordinary amount, and shows a slow but constant increase. Fatal cases included in the latter class rose above 100 in the last week of September; in the last six weeks they were 110, 114, 122, 140, 157, and 171. Of these 171 nearly a half is referred to bronchitis. Phthisis carried off 123 persons, of whom 52 were from 20 to 40 years of age, and 43 between the ages of 40 and 60 years.

Of diseases from which children principally suffer, scarlatina prevails most at present. Sixty-five deaths were caused by it in the week; 3 in St. John, Paddington, 7 in St. John, Westminster (besides 4 from typhus), 6 in the district of Pancras, 9 in the two sub-districts of Lambeth Church. At a house in George-street, Lambeth, a family lost three children in two days from scarlatina; and the Registrar states that the disease is again very prevalent in that locality. The Registrar of St. John, Westminster, reports that scarlatina and typhus prevail to some extent in his district, and that of the 7 deaths from the former, 4 occurred in one locality, Ponsonby-place, Millbank. There was also one in Ponsonby-terrace. Three lascars died of scurvy on the 9th and 10th November on board the Dreadnought Hospital Ship.

Last week the births of 855 boys and 785 girls, in all 1640 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1391.

At the Royal Observatory, Greenwich, the barometer rose to 30·13 in. by noon on Friday. The mean reading was above 30 in. on five days, and the mean of the week was 30·006 in. On Sunday (the 11th) the thermometer rose to 57°, and on that day the mean temperature was 5·6° above the average; after Tuesday the air was cold, and on several days fog prevailed. On Thursday and Friday the thermometer fell so low as 28·5° and 25·7°; and on those days the mean was about 8° below the average. The mean temperature of the air in the week was 41·4°, while that of the water of the Thames was 46·7°. The fog was thickest on Thursday and the morning of Friday; and on the former day the lowest temperature of the Thames was 16·7° above the lowest temperature of the air. The difference between the dew-point temperature and air temperature was only 2·7°. The wind blew generally from the north-east, but the air was for the most part calm.

The Registrars, in compliance with instructions given to them, make occasional communications in their returns with reference to the deaths they have registered, and to particular circumstances in which these have occurred. The correctness of such opinions and statements must be held to rest exclusively on the testimony of the Registrars, and of the medical or other informants.

LAMBETH ; *Lambeth Church (2d Part.)*.—At 27 George-street, on 13th and 15th November, the son and two daughters of a shoemaker, aged respectively 15 months, 9 and 11 years, “scarlatina.” Mr. Logan, the Registrar, says :—“Scarlatina is again very prevalent in this locality.”

GREENWICH ; *West.*—In Dreadnought Hospital Ship, on 9th November, a lascar, aged 30 years, “scurvy, exhaustion.”

In the same ship, on 10th November, a lascar, aged 40 years, “scurvy, exhaustion.”

In the same ship, on 10th November, a lascar, aged 30 years, “scurvy, bronchitis, exhaustion.”

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

† See Note, page 374.

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

† See Note, page 374.

DEATHS Registered in the FORTY-SIXTH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845–54, after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

NOTE.—The letters placed against the names of the sub-districts denote public institutions situated therein, namely,

W—Workhouse;  
H—Hospital;  
L—Lunatic asylum;  
P—Prison;

w—a workhouse not belonging to the district in which it is situated. The following are—

#### OUTLYING WORKHOUSES:

St. George Hanover Square in Chelsea North-west sub-district.  
The Strand - - - " Tottenham-court sub-district.  
East London - - - " Hackney sub-district.  
St. Luke Middlesex - - " Hoxton New Town sub-district.  
London City - - - " Mile End Old Town Lower sub-dis-  
and Bow sub-district.  
St. George Southwark, } " Lewisham Village sub-district.  
for Children - - - }

\* The numbers on the left of the semicolons refer to the Districts in the preceding page.

† Islington West contains the Small-pox and Fever Hospitals.

METEOROLOGICAL OBSERVATIONS taken at the Royal Observatory, Greenwich, during the Week ending Saturday, 17th November 1855. Under the Superintendence of the Astronomer Royal.

Fog was prevalent during the morning.<br>Overcast throughout the day.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| MONDAY . .   | Strong positive throughout the day.                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| TUESDAY . .  | Positive and moderate during the morning; strong positive at other times.   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| WEDNESDAY    | Strong positive till the even-<br>ing; strong negative after-<br>wards.     | The clouds were broken at noon, and at night the sky was clear at intervals; overcast at other times of the day. Fog was prevalent during the morning.<br>The sky was free from cloud during the earlier portion of the morning, and overcast afterwards. A very dense fog prevailed at night.<br>A dense fog prevailed until 8h. A.M., and during the later portion of the morning a thin fog was prevalent; at other times of the day the sky was for the most part covered with cloud.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |  |
| THURSDAY .   | Very strong positive; volleys of sparks were frequent.                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| FRIDAY . .   | Very strong positive; fre-<br>quent volleys of sparks.                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |
| SATURDAY .   | Strong positive throughout the day; sparks were shown during the afternoon. | Cistern of bar. 159 ft. above mean level of sea. Readings coincident with those of R. S.'s flint-glass standard bar. Obs. taken at 9h. A.M.; noon; 3h. P.M.; 9h. P.M. The means of readings in Cols. 4, 7, 8, observed at these times, stand as corrected by Mr. Glaisher from obs. of 5 yrs. ending Dec. 31, 1845 ( <i>Phil. Trans., Pt. 1, 1848</i> ). From values thus obtained, Col. 13 is derived. Col. 7 includes results deduced from max. and min. (self-registering) thermom. with corrections. Readings in Cols. 9, 10, 11, 12 are placed opposite the day which precedes that on which the thermometers are read. The numbers in Cols. 14 and 15 are determined by the use of maximum and minimum thermometers with wetted bulbs. Col. 16 is deter-<br>mined by Mr. Glaisher from all the thermometrical observations made at the Royal Obser-<br>vatory, Greenwich, in the 38 years ending 1851. In Col. 16, + means <i>higher</i> , - <i>lower</i> than<br>average. Temp. of Thames is obtained from self-registering therm. suspended from<br>Dreadnought Hosp. Ship, 2 ft. below the surface (under Captain Sanders, R.N., Super-<br>intendent). Whewell's anemometer (Col. 22.) is read at 10h. A.M. The result is for 24 hours<br>previous, and is placed opposite the day preceding that on which the reading is taken.<br>The mean reading of a thermometer placed on the mainmast of the Dreadnought, and read<br>each day at 9h. A.M., was 41° 8'; and the mean reading at 9h. P.M. was 42° 7'; the mean<br>readings at the Royal Observatory for the same times were 38° 9' and 40° 1' respectively.<br>The reading of the barometer increased from 29·90 in. at the beginning of the week to<br>30·08 in. by 8h. A.M. on the 11th; continued at this reading, with scarcely any variation,<br>till 10h. A.M. on the 12th; decreased to 29·82 in. by noon on the 14th; increased to 30·13 in.<br>by noon on the 16th; and decreased to 30·08 in. by the end of the week. |  |

|              |                                                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |

## WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, NOVEMBER 24.

[No. 47.]

### HEALTH OF LONDON DURING THE WEEK.

In the week that ended on Saturday the deaths of 1073 persons, viz. 547 males and 526 females, were registered in London. This return exhibits an increase of nearly 100 on the weekly deaths of the last fortnight, a result which is for the most part to be referred to the depression of temperature which was mentioned in the last report, and which continued to a great extent during last week. In the ten corresponding weeks of the years 1845-54 the average number of deaths was 1055, which, if raised in proportion to increase of population, becomes 1161. The present rate of mortality is, therefore, still considerably below the high rate which has ruled in London at this season, and which, it is believed, may be permanently reduced.

Last week 524 persons, being nearly half of the total number, died under 20 years of age; 37 died in the fifth vicenniad of life, namely, from 80 to 100 years; the remainder are distributed in the table, in numbers which are nearly equal to each other, over the three intervening periods, though the population which supplied these numbers exists in very different proportions at the different periods, and decreases regularly till the number of persons living about 80 years of age is not a twentieth part of the population at 20.

Scarlatina still prevails, and is not less fatal to children in London than it has been for the last two months. The number of fatal cases was 73; those from other kinds of fever 56. Four deaths from scarlatina occurred in Kensington; 4 in the sub-district of St. John, Westminster; 3 in that of Goswell-street; 6 in the district of Shoreditch; 6 in Woolwich; and 3 in each of the sub-districts, Mile-end Old Town Lower, Leather Market (Bermondsey), and St. George (Camberwell). The deaths from bronchitis have increased from 60 and 80 to 101; 24 are attributed to cancer; one was caused by intemperance; 3 by delirium tremens; and a case is recorded in which a woman of 28 years of age, the wife of a man who works at a wadding factory, died of exhaustion, after premature labour, "the result mainly of poverty and privation."

Last week the births of 828 boys and 786 girls, in all 1614 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1401.

At the Royal Observatory, Greenwich, the mean reading of the barometer, which was 30·041 in. on Sunday, continuously fell till Friday, when it was 29·655 in. The mean of the week was 29·812 in. The mean temperature, which in the previous week had been 41·4°, was last week 39·4°, or 2·6° below the average of the same week in 38 years. The mean daily temperature was below the average on every day except Sunday (the 18th). The air was coldest on

Thursday, when the highest temperature was 41·2°, and the lowest 33·7°, and the mean 37·2°, which is nearly 5° below the average. The wind was on the same day and Friday in the south-west and south; it blew on other days from the north-east and north. The mean dew-point temperature was 38°, and the difference between that and the mean air temperature was 1·4°. The temperature of the water of the Thames was 44·2°; its entire range in the week was 6°. There was rain every day; the quantity on four days, measured by the gauge, was 17-hundredths of an inch.

BETHNAL GREEN; *Town*.—At 7 Nelson-street, on 16th November, the wife of a labourer, aged 28 years, “premature labour of dead child, internal hæmorrhage, and fatal exhaustion, mainly the result of poverty and privation.”

GREENWICH; *West*.—In the Dreadnought Hospital Ship, on 17th November, a ship’s boy, aged 18 years, “scurvy; anæmia.”

BIRTHS Registered LAST WEEK, and in the FORTY-SEVENTH Week of Ten previous Years.

NOTE.—The Occupations are here arranged according to the principle of classification adopted in the Census Returns of 1851. The 17 classes are further sub-divided into sub-classes which are indicated by the reference numbers inserted in this Table. The whole of the Living are returned under the several *Classes*, but they are only distinguished in the separate occupations in which deaths occurred during the week.

\* Persons connected with the land as proprietors are in some instances returned in other classes, where they are referred to their respective occupations.

† Inmates of public institutions are referred to specific occupations when the nature of their former employment is stated.

\* Since the end of 1847 the classification of diseases has undergone some modifications, in consequence of which corrections are necessary, in some places, in calculating the average. An average for metria, derived from the last 7 years and multiplied by 3, is added to the total of class 1 and deducted from the total of class 9; and in like manner an average for rheumatic fever, derived from the last 7 years and

in the FORTY-SEVENTH Week of each of the following Years.

| CAUSES OF DEATH.        | Deaths from all Causes in the Week ending Saturday, |              |              |              |              |              |              |              |              |              | Averages of Temperature and of Deaths in 10 Weeks. | In the Week ending Saturday, Nov. 24, 1855. |                        |                                  |                                  |                                  |                                 |

multiplied by 3, is added to the total of class 1, and deducted from the total of class 10. Corresponding deductions are made from the totals of the particular diseases *childbirth* and *rheumatism*. In the lines partly formed by asterisks the averages are derived not from the deaths of 10 years but those of 7 years.

DEATHS Registered in the FORTY-SEVENTH WEEK of each of the following Years, with the Mean Temperature for the same periods.

NOTE.—The deaths of last week may be compared with the average of deaths in corresponding weeks of 1845-54 after raising the average by a tenth part. This correction is made for increase of population; and the same rule applies to the average of deaths in any district, or from any cause, except those for which the returns of ten years are not complete. The averages of Hampstead and Lewisham are derived from the deaths of only 8 years.

LONDON.—DEATHS registered in 116 PUBLIC INSTITUTIONS.

NOTE.—The letters placed against the names of the sub-districts denote public institutions situated therein, namely,

W—Workhouse;  
H—Hospital;  
L—Lunatic asylum;  
P—Prison;

w—a Workhouse not belonging to the district in which it is situated. The following are—

#### OUTLYING WORKHOUSES:

St. George Hanover Square in Chelsea North-west sub-district.  
The Strand - " Tottenham-court sub-district.  
East London - " Hackney sub-district.  
St. Luke Middlesex - " Hoxton New Town sub-district.  
London City - " Mile End Old Town Lower sub-dis-  
and Bow sub-district.  
St. George Southwark, } " Lewisham Village sub-district.  
for Children

\* The numbers on the left of the semicolons refer to the Districts in the preceding page.

† Islington West contains the Small-pox and Fever Hospitals.

METEOROLOGICAL OBSERVATIONS taken at the Royal Observatory, Greenwich, during the Week ending Saturday, 24th November 1855. Under the Superintendence of the Astronomer Royal.

|--------------|------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| SUNDAY .     | Positive and strong tension at each examination.                                                     | Overcast throughout the day. Misty rain fell during the evening.                                                                                                                                                      |  |
| MONDAY .     | Positive and weak the day.                                                                           | Overcast throughout the day. Rain fell at intervals.                                                                                                                                                                  |  |
| TUESDAY .    | Positive and weak the day.                                                                           | Overcast throughout the day. Rain fell at intervals during the morning.                                                                                                                                               |  |
| WEDNESDAY    | Positive and weak during the morning; strong positive at other times of the day.                     | Overcast throughout the day. Misty rain fell during the evening.                                                                                                                                                      |  |
| THURSDAY .   | Positive and strong tension.                                                                         | Fog was prevalent till 11h. A.M.; the clouds were broken and constantly varying in amount till 11h. P.M., and the sky was overcast afterwards. A shower of rain fell at 7h. P.M., and misty rain fell after 10h. P.M. |  |
| FRIDAY .     | Positive and tension variable.                                                                       | During the morning the sky was partially clear, at other times of the day clouds for the most part covered the sky. Rain fell at night.                                                                               |  |
| SATURDAY .   | Positive and weak during the morning and afternoon. Positive and strong at night; sparks were shown. | The sky was partially clear at intervals, it was however for the most part covered with clouds. Rain fell during the afternoon.                                                                                       |  |

# WEEKLY RETURN

OF

## BIRTHS AND DEATHS IN LONDON.

PUBLISHED BY AUTHORITY OF THE REGISTRAR-GENERAL.

1855. VOL. XVI.] WEEK ENDING SATURDAY, DECEMBER 1.

[No. 48.]

### HEALTH OF LONDON DURING THE WEEK.

THE mortality of the metropolitan districts continues to increase. The deaths, which in the two previous weeks had been 975 and 1073, rose in the last week of November to 1124. The number of deaths last week is less by 137 than would have occurred if the rate of mortality had been as high as it was, on an average, during the corresponding weeks of the last ten years.

The weekly deaths in November have been, taking the averages, 126 more than they were in the preceding month; and the mean temperature of November has been lower to the extent of about 9 degrees than that of October.

There died last week 547 males and 577 females. The number of males corresponds exactly with that of the previous week, and, therefore, the increase (amounting to 51) in the total deaths arose entirely in the female part of the population. Fatal cases of diseases of the respiratory organs (excluding phthisis) have been since the middle of May less numerous than those referred to diseases of the zymotic class, and in part of summer the former were little more than a fourth of the latter. The proportions are now reversed, and last week zymotic diseases numbered 207, while complaints of the respiratory organs were fatal in 234 cases. This effect is due chiefly to bronchitis, the deaths from which were 123: in pneumonia, which numbers 84, hardly any increase is apparent. Hooping-cough was fatal in 29 cases, small-pox in 10, measles in 25, typhus in 27, scarlatina in 62. Four deaths from the last-mentioned complaint are returned from Kensington, all of them, except one, having occurred in the "Potteries." Four occurred also in Somers-town, where the Registrar complains that cleansing operations have been greatly neglected by the Paving Board, under whose management part of his district was placed. A labourer, aged 58 years, died of cholera, after 47 hours' illness, in Fuller's-rents, Cotton-street, Poplar. Fifteen women died of fever or other illness incidental to child-bearing. A girl, 7 years old, died from drinking a quantity of sherry, "being ignorant of its effects."

Last week the births of 828 boys and 787 girls, in all 1615 children, were registered in London. In the ten corresponding weeks of the years 1845-54 the average number was 1415.

At the Royal Observatory, Greenwich, the barometer rose to 30.20 in. on Monday. The mean reading of the week was 29.969 in. The mean temperature was 39.5°, which is 2.3° below the average of the same week in 38 years. The mean temperature was higher towards the end of the week than at the beginning, but was below the average on every day except Wednesday. The *highest* temperature occurred on Tuesday, and was 46°; the *lowest* occurred on Monday, and was only 29.1°. The lowest of the water of the Thames on that day was 40.7°; the mean temperature of the river in the week was 42.1°. The mean dew-point temperature was 36.1°, and the difference between this and the mean temperature of the air was 3.4°. The wind which had been in the north changed to south-west on Saturday. With the exception of some misty rain on two or three days, none fell in the week.

The Registrars, in compliance with instructions given to them, make occasional communications in their returns with reference to the deaths they have registered, and to particular circumstances in which these have occurred. The correctness of such opinions and statements must be held to rest exclusively on the testimony of the Registrars, and of the medical or other informants.

POPLAR ; *Poplar*.—At 6 Fuller’s-rents, Cotton-street, on 24th November, a bricklayer’s labourer, aged 58 years, “cholera (47 hours).”

LAMBETH ; *Lambeth Church (2d Part)*.—At the Workhouse, on 23d November, a carpenter, aged 75 years, “senile debility.” The surgeon remarks, that “this man was admitted on the 5th instant in a state of great apparent neglect and destitution. His person was covered with vermin.”

ST. PANCRAS ; *Gray’s Inn Lane*.—At 42 Upper North-place, on 27th November, the son of a tailor, aged 4 years, “scarlatina maligna (11 days).” The medical attendant states, that “the drain of the house is in a bad state.”

CLERKENWELL ; *Goswell-street*.—At 2 Brewer-street, on 18th November, the daughter of an ivory turner, aged 7 years, “accidentally killed by the effects of sherry wine, being a child, and ignorant of its effects.” *Inquest*.
